Research Profile

Final-year Ph.D. candidate in the Machine Learning Group at RPTU Kaiserslautern-Landau (advisor: Prof. Sophie Fellenz). My research explores how AI systems can make decisions when human values are plural, uncertain, or conflicting. I work on *pluralistic AI alignment*, *multi-objective and safe reinforcement learning*, and *moral decision-making in language-based agents*, with a particular interest in connecting normative questions about human values to practical AI decision-making methods.

Focus areas Pluralistic alignment · Inference-time value alignment · Offline Safe RL · Multi-objective RL

Education

Ph.D., Computer Science, *RPTU University Kaiserslautern-Landau*, Germany
Thesis: *Value-Aligned Reinforcement Learning: From Language-Based to Multi-Objective Decision Making*

M.Sc., Computational Linguistics, *Ludwig Maximilian University of Munich*, Germany

B.A., Sociology (minor: Computer Science), *University of Bamberg*, Germany

Selected Publications

Medical AI Experience

Medical Augmented Reality Summer School 2026. Selected participant in a summer school organized by the Technical University of Munich (TUM), focusing on AI, robotics, and extended reality (XR) for clinical applications.

Hackathon Project. *Spatial AR Visualization of AI Uncertainty in Surgical Environments*. Awarded Best Innovation Project.

Teaching & Supervision

Supervision Bachelor's and Master's projects on LLMs for SMILES/SMARTS molecular generation; RL for molecular property prediction and thermodynamic group-contribution methods; retrieval-augmented (RAG) chatbots for university library services.

Teaching Teaching assistant, *Neural Networks for NLP*.
